Product requirements document (PRD) — RoadSaathi

Owner: product (founder) · **Status:** v1 built; v1.1 launch scope below · **Last updated:** November 2026

1. Vision

Make getting help on the road in India as predictable as booking a cab: **see the price, see the truck, trust the driver, get a proper invoice.**

2. Goals and non-goals

Goals (next 12 months)	Non-goals (for now)
Reliable 24×7 towing and on-spot help across Delhi, then NCR	Owning a truck fleet (we stay asset-light)
Median arrival under 35 minutes in active zones	Statutory/police towing of illegally parked vehicles
Fair, transparent pricing with GST invoicing	Vehicle repairs and spare-parts retail
A partner network operators prefer over listing sites	Insurance products (we partner with insurers, we don't underwrite)
B2B fulfilment for fleets, dealers, insurers and RSA companies	Pan-India launch before NCR unit economics are proven

3. Personas

Persona	Context	Needs	Success looks like
Priya, 32, car owner, Saket	Car won't start at 10:30 p.m. after dinner	Someone trustworthy, fast; knows the cost; safe	Truck arrives in 25 min, price as quoted, invoice on email
Rakesh, 45, owns one flatbed, Mayapuri	Gets 3–4 jobs a day from calls; idle in afternoons	More jobs, fair pay, no chasing payment	2 extra jobs a day, weekly settlement, good ratings
Anil, fleet owner, 8 trucks	Runs a small towing company with employed drivers	Keep trucks busy, see which driver did what, GST paperwork	Every job tracked in the portal; company notified on each assignment
Dispatcher on night shift	Watches open bookings	Know which jobs are stuck, assign manually, call drivers	No job sits unassigned more than 5 minutes
B2B client (insurer / RSA company)	Needs a Delhi network for its policyholders	API, SLA, tracking link, claim evidence	Jobs submitted by API, status webhooks, monthly invoice

4. Core user journeys (all built)

1. **Book:** choose vehicle → service → pickup (and drop for towing) → see quote → sign in with OTP → confirm → get code and PIN.
2. **Dispatch:** nearest eligible online drivers within the radius receive offers (N per round, timeout) → the first to accept is assigned atomically → customer, driver and company are notified.
3. **Fulfil:** driver starts driving → arrives → enters the customer's PIN → job in progress → completes → cash collected or online payment → invoice issued and ledger entry written.
4. **Partner onboarding:** apply → admin approves and sets commission → personalised agreement generated → e-sign with OTP → active.
5. **Settle:** ledger shows what each partner owes or is owed → finance settles with a reference.

5. v1.1 launch scope (must ship before public launch)

ID	Requirement	Acceptance criteria	Priority
L1	**Terms and Privacy acceptance at booking and partner sign-up**	Checkbox (unticked by default) with links; booking or application cannot be submitted without it; store document slug, version, timestamp and IP per user	Must
L2	**Final legal pages**	Lawyer-reviewed Terms, Privacy, Cancellation & Refund, Grievance, Cookie notice; template banner removed	Must
L3	**Grievance officer details**	Name, email, phone and address from Admin → Settings rendered on the grievance page and footer	Must
L4	**Partner KYC documents**	Upload DL, RC, insurance, permit and fitness; admin can view, approve or reject per document; expiry dates stored; partner cannot go online with an expired document	Must
L5	**Analytics consent**	Google Analytics loads only after consent; first-party events contain no PII (already true)	Must
L6	**Production integrations**	DLT SMS live, production SMTP with SPF/DKIM, `EXPOSE_DEV_OTP` off, strong secrets	Must
L7	**Error monitoring and log retention**	Sentry (or similar) alerts on server errors; logs shipped to storage kept 180 days	Must
L8	**Soften e-signature wording** in contract templates (chapter 3) and bump the template version	New version active; old signed contracts unchanged	Must
L9	**Grievance register**	Complaints have status, owner and timestamps; dashboard shows any complaint older than 48 h without acknowledgement	Should
L10	**Refunds for online payments**	Admin issues a full or partial refund through Razorpay; payment status updates; customer emailed	Should (before Razorpay live)
L11	**CI**	Type-check and tests run on every pull request	Should

6. v1.2–v2 scope (post-launch)

Photo condition reports, push notifications, damage-claim workflow, B2B accounts and API, automated payouts, masked calling, WhatsApp booking, account deletion and data export (DPDP, by May 2027), RSA membership, operator SaaS. See `docs/business/05-ai-roadmap.md` for AI items.

7. Non-functional requirements

Area	Requirement
Performance	Quote < 2 s p95 (includes routing); pages LCP < 2.5 s on 4G mid-range Android
Availability	99.5 % monthly for booking and dispatch; cron delay must not stop dispatch (already self-advancing)
Security	OWASP ASVS L1 baseline; role checks on every server action; no PII in analytics
Privacy	Data minimisation; retention per `docs/operations/OPERATIONS-SOP.md` §7; DPDP-ready by May 2027
Accessibility	WCAG 2.1 AA on customer flows (contrast, labels, keyboard)
Localisation	Every customer string in EN and HI; typed dictionaries enforce parity
Money	Integer paise everywhere; totals always equal subtotal + GST (unit-tested)

8. Open product questions

1. Principal vs. marketplace invoicing (decision #2 in the business plan) changes the invoice template and ledger.
2. Should the customer see the driver's phone number, or only masked calling?
3. Cancellation fee: charge online, add it to the partner's next settlement, or waive it during the pilot?
4. Membership design: number of free call-outs, waiting period, vehicles covered.
